

Technical Bulletin

Issue 10025 – Control Arm Supersession

Comline is currently one of the fastest growing automotive brands in Europe and has a growing force of 2500 steering and suspension references. In our latest technical bulletin we are taking a look at the supersession of CCA1041 and CCA1152, popular control arms for the Audi A4.

CCA1041 and CCA1152 control arms were both designed to cater for the A4 variant with sports suspension. Both CCA1041 and CCA1152 are essentially the same control arm design and featured a pre-fitted suspension bush designed to meet the demands of the sports suspension system. In simple terms, this pre-fitted bush has a higher shore hardness rating than would ordinarily be required for the standard suspension system.

CCA1007 Track Control Arm and replacement CRB3035 Control Arm Bush

With this in mind, and to make life more simple for our customers, we have now succeeded both CCA1041 and CCA1152 control arms with an all-new part number, CCA1007. The new part comes equipped with the pre-fitted bush for the more popular, standard suspension system. CRB3035 Control Arm/Trailing Arm Bush is also available separately within the Comline range.

For more information on Comline Steering & Suspension or for any queries regarding this change please contact your Comline Sales Manager on **+44 (0)1582578888** or alternatively contact the Product Team at pdd@comline.uk.com

CRB3035 - Control Arm Bush
