

Technical Bulletin

Issue 10026 - Comline Fuel Filter Supersession

Reigning as one of the fastest growing automotive brands in Europe, Comline is a growing force in filters with a range encompassing over 1800 references. In our latest technical bulletin we are taking a look at the supersession of Comline number, EFF248D by an all-new part number – **EFF211**, which caters for an extensive range of manufacturers' vehicles, including Nissan, Opel, Renault and Vauxhall.

The new Comline part number, **EFF211**, features a larger media surface area in comparison to its predecessor. The redesign was essential to ensure the redesign matches the OE specification with 'zig-zag' rather than straight media pleating. Not only does the enhancement matchup to the latest OE design, the new part number's greater surface area, a direct result of the new 'zig-zag' media pleating, will allow EFF211 to increase its dust holding capacity, increasing the filter's efficiency and longevity.

Matching the OE design, Comline EFF211 features a 'zig-zag' media surface area in comparison to EFF248D
